

Universal Valve 521 Double Poppet Series Safety Valve

- A 100% Liquid Tight Seal even with top off. Offers the you the most protection in the field today.
- Universal's Emergency Shut-off Valve is designed to immediately stop product flow in the event of fire or collision at the dispenser.
- 1.5" NPT opening allows for minimal flow restriction.
- Only Universal allows a 100% seal with the top off.
- Only Universal offers an Independent upper and lower seal on the 521 Double Poppet.
- Only Universal offers you a shear section price advantage.
- Only Universal offers you our 67 year tradition of quality without recalls.
- The valve can be Boss or U-Bolt mounted. This is standard on every valve, no special model needed.
- Built In Air Test Port allows pneumatic testing of the entire pumping system, without breaking the line.
- Fusible Link allows valve to close automatically, reducing fire hazard
- The easy to replace top allows for slide on and off without lifting or tipping the dispenser.
- It is UL listed and Conforms to NFPA 30A.
- Comes in Single and Double poppets.
- Zinc Plated for maximum corrosion resistance. No Black coatings or paints that wear off in your hands.
- Secondary Containment 2" external threaded valves are available to meet your secondary containment needs.
- Independent middle shear section, allows replacement without draining dispenser.
- No need to jack up or tip dispenser for replacement of shear section.
- Can be retrofitted to single poppet models
